HOW TO MAKE A HANDY

UTENSIL KEY CHAIN

I made this for myself a few months ago & it has been so great! There's a bunch of reasons why, & here's a few: 1. I always have a fork & spoon on me. So I'm always ready to eat 2. It saves water & dishes because I never have to wash forks & tons of utensils 3. A lot of times at parties or events where the only utensil option is using crappy plastic forks & spoons that end up getting thrown away. But I always use my utensil key chain, so I don't have to contribute to this ridiculous wasteful mess.

OK, so it's really easy to make this.

Just get a fork & spoon. You might want to cut the handles a little shorter to make it more manageable. Drill a hole in the end, and then slip them on your key ring.

VOILA! Now lets

Toward the front we inserted two springs and to hit the bucket, we attached another stick to actually hit the bucket. Our attempt failed but if you experiment you could get it down yourself, thats D.I.Y.

We also have and use a very effective D.I.Y. microphone stand. It's made out of two weights stacked on each other for a foundation. Then we have a PVC pipe that stands in the center of the weights. We then inserted a ski pole into the PVC piping and because the pointy end of the Mic was adjustable, we then took duct tape and tape the Mic itself to the handle of the ski pole, and voila, a Mic stand.

Also, if you have two smaller amps and want more sound, you can plug them into each other. You need to run a patch cord from the audio input of one amp (preferably the larger) into the amp of another. Then you just plug your guitar into the first amp. This will cause distortion, but it's nice if you're into that kind of thing because it also doubles as your distortion pedal.

EARTH FIRST! Humboldt, Canopy Communique #1 From the trees:

Cutten: The McKay Tract canopy. The landscape unfolds below us as a patchwork quilt of war

Looking West, one sees the suburb progress enacting its will upon the occupied countryside. More 'development' is planned but is not yet happening. We have met primarily friendly people here who enjoy hanging out in the forest. We've asked them if they want their suburb to 'grow', to continue to 'develop', and they emphatically do not.

Among the second and third growth trees to the South lie a few erroneous mini-mansions encroaching upon the landscape with stumps in their yards wider than any of the three SUVs in their driveways. The residents enjoy a quiet life until one of them starts running power tools.

We look East and see the tops of enormous old growth redwoods towering
